

Fuel Consumption

As a baseline, you can use the following values to calculate your fuel consumption.

	Tarmac	Gravel
Stage	56L / 100km	60L / 100km
Road	13L / 100km	13L / 100km

These values depend on the driving style, the profile of the roads as well as the average speed of the rally, it will be necessary thereafter to calculate your own consumption using data acquisitions.

We advise you to keep a safety volume of 10L in the fuel tank at all times.
